MIGRATING DOMINIUM INC. TO A NEW EMAIL SECURITY PLATFORM WITHOUT DISRUPTIONS

Anders partnered with Dominium, Inc. to manage their migration to a new email security platform with no disruptions to ensure a smooth transition.

SEEKING SECURITY AND SUPPORT

▶ Dominium wanted to move to a new email security platform that supports and protects its users

▶ The migration needed to occur with limited disruption to employees and clients so that the multiple, critical business systems the team supported could experience a smooth transition

▶ Dominium didn't want to rely on Microsoft Support for the migration, and instead desired a technology partner to provide a deeper level of support

THE ANDERS TECHNOLOGY SOLUTION

▶ Anders Technology advisors had experience with the specific platforms Dominium wanted to migrate to, boosting their confidence in our ability to manage the project while avoiding pitfalls that would impede the process

▶ The Anders Technology team ensured the email security platform migration was achieved without disruption, allowing critical business systems to continue unaffected by the change

▶ The Dominium team was trained by Anders Technology advisors on how to manage the new system and were provided guidance on best practices to ensure continued success

▶ Because their experience with Anders met their needs on a holistic basis, Dominium chose to partner with us again to expand Microsoft 365 support for their team
